

Factory Air Quality and Worker Health

Thank you for participating in this survey. We are conducting a study to understand the impact of indoor air quality on worker health in factory environments. Your insights as a healthcare professional will help us design an IoT-based air quality monitoring system that aims to reduce health risks in industrial settings. Please take a few moments to answer the following questions. Your responses will remain confidential and are invaluable to our research.

1. **In your experience, what are the most common health issues reported by factory workers related to poor air quality?**

Mark only one oval.

- ☐ Respiratory problems
- ☐ Skin irritation
- ☐ Eye irritation
- ☐ Fatigue
- ☐ Other

2. **Which pollutants do you believe are most harmful to factory workers' health?**

Mark only one oval.

- ☐ Carbon Monoxide (CO)
- ☐ Volatile Organic Compounds (VOCs)
- ☐ Nitrogen Dioxide (NO₂)
- ☐ Particulate Matter (PM_{2.5}, PM₁₀)
- ☐ Other

3. **How often do you encounter health problems among factory workers that could be linked to air quality?**

Mark only one oval.

- ☐ Frequently
- ☐ Occasionally
- ☐ Rarely
- ☐ Never

4. **Do you think real-time air quality monitoring in factories could reduce the incidence of air-related health issues?**

Mark only one oval.

- ☐ Yes
- ☐ No
- ☐ Not sure

5. **What immediate actions do you recommend when poor air quality is detected in a factory setting?**

Mark only one oval.

- ☐ Increase ventilation
- ☐ Provide protective equipment (masks, filters)
- ☐ Evacuate affected areas
- ☐ Other
